

Amendments to the Specification

Please replace the paragraph [0033] of the published application (US 2007/0294955 A1), with the following paragraph:

FIG. 3, parts "a" and "b", is a schematic representation of towers for a wind turbine according to the invention (not to scale);

Please replace the paragraph [0034] of the published application (US 2007/0294955 A1), with the following paragraph:

FIG. 4, parts "a" and "b", is a schematic representation of a prefabricated metal walls parts according to the invention (not to scale), and FIG. 4, parts "c" and "d" is a schematic representation of a prefabricated metal walls parts according to the invention modified to include a kink (not to scale);

Please replace the paragraph on page 9, lines 15 – 35, corresponding to paragraph [0041] of the published application (US 2007/0294955 A1), with the following paragraph:

FIG. 4a shows an embodiment of a prefabricated metal wall part 5 according to the invention for use in a tower 4 for a wind turbine 1 as described hereinabove. The prefabricated metal wall part 5 is characterised in that the wall part comprises an essentially quadrangular portion 6 having an outwardly facing surface 7 facing the exterior of the tower and an inwardly facing surface 8 facing the interior of the tower, said portion having a top edge 9, a bottom edge 10, a first side edge 11 and a second side edge 12, wherein the first side edge 11 is provided with a first flange 13 along at least part of the length of the first side edge 11 and wherein the second side edge 12 is provided with a second flange 14 along at least part of the length of the second side edge 12. The first flange 13 is provided with an additional first flange 15 which essentially forms an L-shape with the first flange 13 and the second flange 14 is provided with an additional second flange 16 which essentially forms an L-shape with the second flange 14. The prefabricated metal wall parts are not drawn to scale. The cross section A-A is shown in FIG. 4b. Typical dimensions for such a prefabricated metal wall parts for the lower ring of a conical tower or tower segment would be a width at the top edge 9 of between about 0.60 and 1.00 m, for example about 0.86 m, a width at the bottom edge 10 of between about 1.30 and 0.70 m, for example about 1.04 m, a height of between about 10 and 20 meters, for example 20 meters, and a height of the extending first flange 13 and second flange 14 of between 0.10 and 0.20 m, for example about 0.15 m. A typical thickness of the prefabricated metal wall parts would be between 8 and 16 mm, for example about 12 mm. FIG. 4c shows essentially quadrangular portion 6, having at least one kink 25 essentially in the direction between the bottom edge and the top edge of the prefabricated metal wall part. FIG. 4d also shows this as cross-section A-A of FIG. 4c.
